Career objective

Software Engineer with 7 years of experience designing, developing, and supporting scalable enterprise and web applications across startup and enterprise environments. Proficient in C, C#, ASP.NET, Java, Spring Boot, JPA, PHP, Laravel, Python, Django, JavaScript/TypeScript, React, Node.js, SQL, Azure, and AWS. Experienced in modernising legacy applications, developing secure APIs, integrating enterprise systems, and delivering reliable, maintainable software solutions. Strong problem-solving and analytical skills with a proven ability to collaborate effectively with cross-functional teams, troubleshoot complex technical challenges, and contribute throughout the full software development lifecycle in Agile environments. Based in Perth with Australian industry experience.

Key Skills

- **Programming Languages:** C, C#, Java/Maven, JavaScript, TypeScript, Python, PHP, SQL
- **Frontend:** React, Next.js, Angular, Vue.js, HTML5, CSS3, Tailwind CSS, Bootstrap, GSAP, jQuery
- **Backend & Frameworks:** Node.js, Express.js, NestJS, ASP.NET Core (MVC & Web API), Spring Boot, Django, Flask, Laravel
- **Databases:** PostgreSQL, Microsoft SQL Server, MySQL, MongoDB, Oracle
- **API Development:** RESTful APIs, GraphQL, JWT Authentication, OAuth 2.0
- **Cloud & DevOps:** Microsoft Azure, AWS, Docker, CI/CD, Azure DevOps, GitHub Actions, Bitbucket Pipelines, cPanel, Hostinger
- **Version Control:** Git, GitHub, GitLab, Bitbucket
- **Testing & Quality Assurance:** Jest, Cypress, Mocha, Test-Driven Development (TDD), Unit Testing, Integration Testing
- **Architecture & Development Practices:** Agile (Scrum & Kanban), Microservices, MVC, Object-Oriented Programming (OOP), SOLID Principles, Design Patterns
- **AI-Assisted Development:** OpenAI Codex, Claude, Kimi, GitHub Copilot

Employment history

Software Developer

May, 2025 - Current

AB Web Developers, U 43/273 Beaufort Street, Perth, WA 6000

Key Responsibilities

- Designed, developed, and maintained scalable commercial web applications using **C#, .NET, React, Next.js, Java, Spring Boot, JavaScript, TypeScript, Node.js, GraphQL, PostgreSQL**, and **SQL**.
- Built responsive, cross-platform user interfaces with a strong focus on performance, accessibility, usability, and maintainability.
- Designed, developed, and integrated **RESTful APIs** and microservices, leveraging **JWT authentication**, and third-party services to support business-critical workflows.
- Diagnosed and resolved production issues, performed root cause analysis, and delivered timely technical support to ensure high application availability.
- Managed source control, release management, and application deployments using **Git, Azure DevOps, CI/CD pipelines**, and cloud-hosted environments.

- Collaborated with cross-functional teams, including designers, developers, QA engineers, and business stakeholders, to deliver high-quality software aligned with business objectives.
- Applied software engineering best practices, including code reviews, automated testing, SOLID principles, clean architecture, and Agile development methodologies.
- Leveraged AI-assisted development tools (**Codex, Claude & Kimi**) to accelerate development, improve code quality, and streamline software delivery.

Key Achievements

- Successfully delivered multiple commercial web applications on time and to a high standard, resulting in strong client satisfaction and repeat business.
- Led the redevelopment of the **Cloudfap & Buy Blinds Online** eCommerce platform, significantly improving performance, maintainability, scalability, and user experience.
- Delivered multiple business-critical website redesign and rebranding projects with zero major production issues during deployment.
- Recognised for consistently delivering high-quality software solutions, resulting in a contract extension.
- Improved development efficiency by adopting modern development practices, **CI/CD automation**, and **AI-assisted coding tools**.

Software Developer

July, 2023 - April, 2025

Tier5 Technology Solutions Pvt Ltd, Calcutta, India

Tier5 is a product based IT firm providing software solution services mostly for the clients based in the USA.

Key Responsibilities

- Designed, developed, and maintained enterprise-grade web applications and distributed systems using **C#, .NET, Vue.js, TypeScript, Node.js, Java, Spring Boot, Microsoft SQL Server, PostgreSQL, and RESTful APIs**.
- Engineered scalable backend services and responsive cross-platform frontend applications, translating business requirements into secure, high-performance software solutions.
- Designed and implemented secure **RESTful APIs** and microservices, leveraging **JWT authentication**, role-based access control (RBAC), and Spring Security to safeguard business-critical applications.
- Designed, developed, and optimised **Microsoft SQL Server and PostgreSQL** databases using advanced SQL, indexing strategies, stored procedures, query optimisation, and performance tuning techniques.
- Investigated, diagnosed, and resolved complex production issues across applications, **APIs**, databases, and cloud infrastructure, performing root cause analysis to improve system reliability and availability.
- Managed and deployed cloud-hosted applications using **Microsoft Azure, Azure DevOps, and AWS (EC2, RDS, and S3)**, ensuring secure, scalable, and highly available production environments.
- Built, maintained, and optimised automated **CI/CD pipelines using Azure DevOps, Docker, and Git**, streamlining release management and reducing deployment risk.
- Applied modern DevOps and software engineering practices, including version control, automated testing, continuous integration, code reviews, SOLID principles, and clean architecture.
- Participated in Agile delivery, sprint planning, technical design sessions, architecture discussions, and peer code reviews to improve software quality, scalability, and maintainability.
- Collaborated with product owners, business analysts, QA engineers, UX designers, and cross-functional teams to deliver reliable, high-quality software aligned with business objectives.

Key Achievements

- Improved API response times by **35%** through backend optimisation, **SQL** query tuning, database indexing, and performance profiling.
- Developed reusable React components and shared libraries that accelerated feature delivery and improved consistency across multiple projects.
- Automated **Azure DevOps and Docker-based CI/CD pipelines**, reducing manual deployment effort, improving release consistency, and shortening delivery cycles.
- Increased application reliability by implementing robust exception handling, structured logging, automated testing, and code quality standards, resulting in fewer production incidents.
- Successfully delivered multiple enterprise software projects on schedule while maintaining high code quality, system stability, security, and stakeholder satisfaction.
- Contributed to modernising legacy applications by adopting contemporary development practices, improving maintainability, scalability, and long-term supportability.

Software Engineer

January, 2022 - June, 2023

JustGo Technologies Ltd, Bangla Motor, Dhaka, Bangladesh

JustGo provides membership and event management solutions to the sport industries mainly in the English speaking countries like UK, Scotland & Australia.

Key Responsibilities

- Designed, developed, and maintained enterprise-grade web applications using **C#, .NET, Angular, Node.js, Python, Django, TypeScript and Microsoft SQL Server**, following modern software engineering best practices.
- Engineered scalable, secure, and maintainable cross-platform software solutions by translating business and technical requirements into high-quality applications.
- Designed and implemented secure **RESTful APIs** and backend services using **.NET**, incorporating **JWT-based** authentication and authorisation.
- Designed, developed, and optimised **Microsoft SQL Server** databases using advanced **SQL**, stored procedures, indexing strategies, query optimisation, and performance tuning techniques.
- Managed cloud-hosted applications on **Microsoft Azure**, including **Azure App Service, Azure SQL Database, Azure Storage, and Azure DevOps**, ensuring secure, scalable, and highly available environments.
- Built, maintained, and optimised automated **CI/CD pipelines** using **Azure DevOps** and **Git**, improving deployment reliability, release consistency, and delivery efficiency.
- Investigated, diagnosed, and resolved complex production issues through root cause analysis, performance monitoring, and proactive application support.
- Participated in software architecture discussions, technical design reviews, and peer code reviews to improve application scalability, maintainability, security, and code quality.
- Collaborated within **Agile Scrum teams**, contributing to sprint planning, daily stand-ups, backlog refinement, retrospectives, and continuous improvement initiatives.
- Worked closely with business analysts, product owners, QA engineers, UX designers, and stakeholders to deliver high-quality software that met business objectives.
- Applied modern software engineering principles, including SOLID, Clean Architecture, secure coding practices, automated testing, and continuous integration throughout the software development lifecycle.

Key Achievements

- Improved application performance by **35%** through backend optimisation, **SQL** query tuning, database indexing, and performance profiling.
- Automated **Azure DevOps CI/CD pipelines**, significantly reducing deployment time, minimising release risk, and improving delivery consistency.

- Developed reusable **Angular** components and shared frontend libraries, accelerating feature delivery and improving code consistency across multiple projects.
- Increased application reliability by implementing robust exception handling, validation, logging, and automated testing, reducing production defects and improving system stability.
- Successfully delivered multiple enterprise applications on schedule while maintaining high standards of software quality, security, and stakeholder satisfaction.
- Recognised for proactively resolving complex production issues, driving continuous platform improvements, and contributing to the long-term maintainability of enterprise systems.

Software Engineer

October, 2020 – December, 2021

MESOLshare Ltd., Dhaka, Bangladesh

MESOLshare is a solar panel solution provider founded by a German entrepreneur.

Key Responsibilities

- Designed, developed, and maintained scalable web applications using **Python, Django, React, TypeScript, Node.js, Java, Spring Boot, and PostgreSQL**, delivering secure and high-performance software solutions.
- Built responsive, cross-browser user interfaces with **Vue.js, JavaScript, HTML5, CSS3, and Bootstrap**, focusing on usability, accessibility, and performance.
- Designed, developed, and maintained secure **RESTful APIs using Django REST Framework (DRF)**, implementing **JWT-based** authentication, role-based access control, and **API** best practices.
- Designed, optimised, and administered **PostgreSQL** databases using advanced **SQL**, indexing strategies, query optimisation, and schema design to improve application performance, scalability, and data integrity.
- Deployed, configured, and managed cloud-hosted applications on **AWS, including EC2, RDS, and S3**, leveraging **Docker** to streamline development, testing, and deployment workflows.
- Built and maintained **CI/CD pipelines** using **Git** and modern **DevOps** practices, enabling reliable, automated deployments and reducing manual release effort.
- Investigated, diagnosed, and resolved production issues through root cause analysis, application monitoring, debugging, and performance optimisation to ensure high system availability.
- Collaborated closely with product owners, designers, QA engineers, and cross-functional Agile teams to deliver high-quality software aligned with business objectives.
- Conducted peer code reviews, developed unit and integration tests, and applied **SOLID** principles, clean architecture, and secure coding practices to improve code quality and long-term maintainability.
- Participated in Agile ceremonies, including sprint planning, backlog refinement, daily stand-ups, sprint reviews, and retrospectives, contributing to continuous improvement and successful project delivery.

Software Developer

September, 2019 – June, 2020

Visma Labs AB, Växjö, Sweden

Visma labs is one of the biggest software solutions providers in Europe.

Key Responsibilities

- Designed, developed, and maintained enterprise-grade software solutions using **C#, ASP.NET Core, .NET, Angular, Node.js, PHP, Laravel, Microsoft SQL Server, and Microsoft Azure**.
- Engineered scalable backend services, **RESTful APIs**, and responsive frontend applications to support business-critical systems and evolving business requirements.
- Designed, developed, and optimised **Microsoft SQL Server** databases using **Entity Framework Core**, advanced **SQL**, stored procedures, indexing strategies, and performance tuning techniques.
- Managed cloud-hosted applications on **Microsoft Azure**, overseeing application configuration, monitoring, and secure deployments to ensure high availability and reliability.

- Built, maintained, and optimised automated **CI/CD pipelines using Azure DevOps, Git, and Docker**, improving deployment efficiency, release consistency, and operational reliability.
- Investigated, diagnosed, and resolved complex production issues through root cause analysis, performance profiling, and proactive application support.
- Participated in **Agile** delivery, sprint planning, architecture discussions, technical design sessions, and peer code reviews to enhance software quality, scalability, and maintainability.
- Applied modern software engineering practices, including SOLID principles, Clean Architecture, automated testing, secure coding standards, and continuous integration throughout the development lifecycle.
- Collaborated closely with product owners, business analysts, QA engineers, and cross-functional teams to deliver reliable, high-quality software aligned with business objectives.

Key Achievements

- Improved API performance by **40%** through backend optimisation, SQL query tuning, database indexing, and application refactoring.
- Successfully migrated legacy applications to **.NET Core**, improving scalability, maintainability, performance, and long-term supportability.
- Reduced deployment time by **more than 75%** by implementing automated **Azure DevOps CI/CD pipelines** and streamlining release processes.
- Increased application stability by implementing centralised exception handling, structured logging, and enhanced monitoring, significantly reducing production incidents.
- Successfully delivered multiple enterprise software releases on schedule while maintaining high standards of quality, security, and minimal production defects.

Junior Software Engineer

August, 2016 – March, 2017

bGlobal Interactive Ltd., Dhaka, Bangladesh

bGlobal is an outsourcing company that develops software for USA based clients.

Key Responsibilities

- Designed, developed, and maintained scalable web applications using **C#, ASP.NET, PHP, Laravel, React, JavaScript, and MySQL**, delivering secure, high-performance solutions that meet business requirements.
- Built responsive, cross-browser user interfaces with **React, JavaScript, jQuery, HTML5, CSS3, and Bootstrap**, focusing on usability, accessibility, and performance.
- Designed, developed, and integrated secure **RESTful APIs**, implementing **JWT-based authentication**, role-based access control, and third-party system integrations.
- Designed, optimised, and maintained **MySQL** databases using advanced SQL, schema design, indexing strategies, stored procedures, and query optimisation to improve application performance and data integrity.
- Developed, customised, and maintained WordPress themes, plugins, and CMS functionality, delivering tailored content management solutions for diverse client requirements.
- Deployed and managed cloud-hosted applications on **AWS, including EC2, RDS, and S3**, leveraging Docker to streamline development, testing, and deployment workflows.
- Collaborated with designers, QA engineers, project managers, and stakeholders within **Agile** teams to deliver high-quality software aligned with business objectives.
- Investigated and resolved production issues through root cause analysis, debugging, performance profiling, and proactive application support.
- Conducted peer code reviews, implemented automated testing, and applied SOLID principles, clean architecture, and secure coding practices to improve code quality and maintainability.
- Managed source control, release management, and **CI/CD workflows using Git and Docker** to ensure reliable, repeatable software deployments.

Key Achievements

- Reduced page load times by **35%** through database optimisation, caching strategies, asset optimisation, and frontend performance enhancements.
- Developed reusable Laravel modules, shared libraries, and **RESTful APIs** that accelerated feature delivery and reduced development effort across multiple projects.
- Automated **Docker**-based development and deployment workflows, improving release efficiency, deployment consistency, and developer productivity.
- Successfully delivered multiple client websites, **eCommerce** platforms, and business applications on schedule while maintaining high standards of quality, security, and client satisfaction.
- Improved application maintainability by introducing reusable components, coding standards, and modern development practices that simplified ongoing support and future enhancements.

Education & Training

- ICT50220 Diploma of Information Technology (Back End Web Development) - Equinim College - Perth, Australia (2026)
- Introduction to AI with Python – North Metropolitan TAFE (2026)
- Cyber Security & Python – North Metropolitan TAFE (2025)
- Data Analysis Bootcamp – North Metropolitan TAFE (2025)
- Cloud Engineering – North Metropolitan TAFE (2025)
- Professional Diploma in Software Development – Sweden (2020)
- Master of Information Systems (partial) – Sweden (2019)
- Bachelor of Information Science – Bangladesh (2013)

Key Value

- 7 years commercial software engineering experience
- Based in Perth with Australian work experience
- Strong full-stack and cloud capability
- Experience across startup and enterprise environments
- Client-facing communication and problem-solving skills
